

Waldo provides software engineering as well as IT infrastructure support for both our internal systems, as well as our various tools and specialized client applications.

Waldo has 27 years' experience in professional software development and IT infrastructure services. During that time he implemented large financial systems for multi-national companies, multi-point integrations between major cloud based B2B services and an extensive portfolio of database driven systems. This affords him the knowledge to strategically apply technology to our own internal operations as well as our clients for improving efficiency and effectiveness.

As an electrical engineer (B.Sc. Eng.) by study, his analytical thinking skills makes him an invaluable contributor for clients
